My name is Subhashish Chattopadhyay. I have been teaching for IIT-JEE, Various International Exams (such as IMO [International Mathematics Olympiad], IPhO [International Physics Olympiad], IChO [International Chemistry Olympiad]), IGCSE (IB), CBSE, I.Sc, Indian State Board exams such as WB-Board, Karnataka PU-II etc since 1989. As I write this book in 2016, it is my 25 th year of teaching. I was a Visiting Professor to BARC Mankhurd, Chembur, Mumbai, Homi Bhabha Centre for Science Education (HBCSE) Physics Olympics camp BARC Campus.
The selection for National Camp (for Official Science Olympiads - Physics, Chemistry, Biology, Astronomy) happens in the following steps....

1) NSEP (National Standard Exam in Physics) and NSEC (National Standard Exam in Chemistry) held around 24th November. Approx 35,000 students appear for these exams every year. The exam fees is Rs 100 each. Since 1998 the IIT JEE toppers have been topping these exams and they get to know their rank / performance ahead of others.

2) INPhO (Indian National Physics Olympiad) and INChO (Indian National Chemistry Olympiad). Around 300 students in each subject are allowed to take these exams. Students coming from outside cities are paid fair from the Govt of India.

3) The Top 35 students of each subject are invited at HBCSE (Homi Bhabha Center for Science Education) Mankhurd, near Chembur, BARC, Mumbai. After a 2-3 weeks camp the top 5 are selected to represent India. The flight tickets and many other expenses are taken care by Govt of India.

Since last 50 years there has been no dearth of “Good Books”. Those who are interested in studies have been always doing well. This e-Book does not intend to replace any standard text book. These topics are very old and already standardized.
There are 3 kinds of Text Books

- The thin Books - Good students who want more details are not happy with these. Average students who need more examples are not happy with these. Most students who want to "Cram" quickly and pass somehow find the thin books “good” as they have to read less !

- The Thick Books - Most students do not like these, as they want to read as less as possible. Average students are “busy” with many other things and have no time to read all these.

- The Average sized Books - Good students do not get all details in any one book. Most bad students do not want to read books of “this much thickness“ also !!

We know there can be no shoe that’s fits in all.

Printed books are not e-Books! Can’t be downloaded and kept in hard-disc for reading “later”

--------

So if you read this book later, you will get all kinds of examples in a single place. This becomes a very good “Reference Material”. I sincerely wish that all find this “very useful”.

Students who do not practice lots of problems, do not do well. The rules of “doing well” had never changed .... Will never change!
After 2016 CBSE Mathematics exam, lots of students complained that the paper was tough!

CBSE assures remedial measures for tricky and tough Class XII Math paper

After several students claimed that the Central Board of Secondary Education (CBSE) Class XII board Mathematics examination paper was ‘tricky’ and tough, the board has issued a clarification on remedial measures which are likely to be taken before evaluation.

The CBSE says that feedback received from various stakeholders like students, subject teachers and examiners will be put before the committee of subject experts.
CBSE Class 12 exam: Issue of tough maths paper raised in Parliament

A senior Congress member on Thursday raised the issue of the tough mathematics question paper in the ongoing CBSE board examinations and asked the government to consider the issue "seriously".

New Delhi: A senior Congress member on Thursday raised the issue of the tough mathematics question paper in the ongoing CBSE board examinations and asked the government to consider the issue "seriously".
In March 2016, students of Karnataka PU-II also complained the same, regarding standard 12 (PU-II Mathematics Exam). Even though the Math Paper was identical to previous year, most students had not even solved the 2015 Question Paper.

These complains are not new. In fact since last 40 years, (since my childhood), I always see this; every year the same setback, same complain!

In this e-Book I am trying to solve this problem. Those students who practice can learn.

No one can help those who are not studying, or practicing.
A very polite request:

I wish these e-Books are read only by Boys and Men. Girls and Women, better read something else; learn from somewhere else.
Preface

We all know that in the species “Homo Sapiens”, males are bigger than females. The reasons are explained in standard 10, or 11 (high school) Biology texts. This shapes or size, influences all of our culture. Before we recall / understand the reasons once again, let us see some random examples of the influence

Random - 1

If there is a Road rage, then who all fight? (generally?). Imagine two cars driven by adult drivers. Each car has a woman of similar age as that of the Man. The cars “touch” or “some issue happens”. Who all comes out and fights? Who all are most probable to drive the cars?

( Men are eager to fight, eager to rule, eager for war. Men want to drive. Men want to win )

Random - 2

Heavy metal music artists are all Men. Metallica, Black Sabbath, Motley Crue, Megadeth, Motorhead, AC/DC, Deep Purple, Slayer, Guns & Roses, Led Zeppelin, Aerosmith ….. the list can be in thousands. All these are grown-up Boys, known as Men.

( Men strive for perfection. Men are eager to excel. Men work hard. Men want to win. )
Apart from Marie Curie, only one more woman got Nobel Prize in Physics. (Maria Goeppert Mayer - 1963). So, ... almost all are men.

The best Tabla Players are all Men.
History is all about, which Kings ruled. Kings, their men, and Soldiers went for wars. History is all about wars, fights, and killings by men.

Boys start fighting from school days. Girls do not fight like this.

( Men are eager to fight, eager to rule, eager for war. Men want to drive. Men want to win. )
Random - 6

The highest award in Mathematics, the “Fields Medal” is around since decades. Till date only one woman could get that. (Maryam Mirzakhani - 2014). So, ... almost all are men.

Random - 7

Actor is a gender neutral word. Could the movie like “Top Gun” be made with Female actors? The best pilots, astronauts, Fighters are all Men.
In my childhood had seen a movie named “The Tower in Inferno”. In the movie when the tall tower is in fire, women were being saved first, as only one lift was working...

Many decades later another movie is made. A box office hit. “The Titanic”. In this also .... As the ship is sinking women are being saved. **Men are disposable.** Men may get their turn later...

Movies are not training programs. Movies do not teach people what to do, or not to do. Movies only reflect the prevalent culture. **Men are disposable,** is the culture in the society. Knowingly, unknowingly, the culture is depicted in Movies, Theaters, Stories, Poems, Rituals, etc. I or you can’t write a story, or make a movie in which after a minor car accident the Male passengers keep seating in the back seat, while the both the women drivers come out of the car and start fighting very bitterly on the road. There has been no story in this world, or no movie made, where after an accident or calamity, Men are being helped for safety first, and women are told to wait.
Artists generally follow the prevalent culture of the Society. In paintings, sculptures, stories, poems, movies, cartoon, Caricatures, knowingly / unknowingly, “the prevalent Reality” is depicted. The opposite will not go well with people. If deliberately “the opposite” is shown then it may only become a special art, considered as a special mockery.

Random - 10

Men go to “girl / woman’s house” to marry / win, and bring her to his home. That is a sort of winning her. When a boy gets a “Girl-Friend”, generally he and his friends consider that as an achievement. The boy who “got / won” a girl-friend feels proud. His male friends feel, jealous, competitive and envious. Millions of stories have been written on these themes. Lakhs of movies show this. Boys / Men go for “bike race “, or say “Car Race “, where the winner “gets “ the most beautiful girl of the college.

( Men want to excel. Men are eager to fight, eager to rule, eager for war. Men want to drive. Men want to win. )

Prithviraj Chauhan ‘ went ` to “pickup“ or “abduct“ or “win“ or “bring“ his love. There was a Hindi movie (hit) song ... “Pasand ho jaye, to ghar se utha laye “. It is not other way round. Girls do not go to Boy’s house or man’s house to marry. Nor the girls go in a gang to “pick-up “ the boy / man and bring him to their home / place / den.

Random - 11

Rich people; often are very hard working. Successful business men, establish their business (empire), amass lot of wealth, with lot of difficulty. Lots of sacrifice, lots of hard work, gets into this. Rich people’s wives had no contribution in this wealth creation. Women are smart, and successful upto the
extent to choose the right/rich man to marry. So generally what happens in case of Divorces? Search the net on “most costly divorces” and you will know. The women; (who had no contribution at all, in setting up the business / empire,) often gets in Billions, or several Millions in divorce settlements.

See http://skmclasses.kinja.com/save-the-male-1761788732

It was Boys and Men, who brought the girls / women home. The Laws are biased, completely favoring women. The men are paying for their own mistakes.

See https://zookeepersblog.wordpress.com/biased-laws/

( Man brings the Woman home. When she leaves, takes away her share of big fortune! )

Random - 12

A standardized test of Intelligence will never be possible. It never happened before, nor ever will happen in future; where the IQ test results will be acceptable by all. In the net there are thousands of charts which show that the intelligence scores of girls / women are lesser. Debates of Trillion words, does not improve performance of Girls.

I am not wasting a single second debating or discussing with anyone, on this. I am simply accepting ALL the results. IQ is only one of the variables which is required for success in life. Thousands of books have
been written on “Networking Skills”, EQ (Emotional Quotient), Drive, Dedication, Focus, “Tenacity towards the end goal” … etc. In each criteria, and in all together, women (in general) do far worse than men. Bangalore is known as “….. capital of India”. [Fill in the blanks]. The blanks are generally filled as “Software Capital”, “IT Capital”, “Startup Capital”, etc. I have attended hundreds of meetings, regarding “technology startups”, or “idea startups”. These meetings have very few women. Starting up new companies are all “Men’s Game” / “Men’s business”. Only in Divorce settlements women will take their goodies, due to Biased laws. There is no dedication, towards wealth creation, by women.

Random - 13

Many men, as fathers, very unfortunately treat their daughters as “Princess”. Every “non-performing “woman / wife was “princess daughter” of some loving father. Pampering the girls, in name of “equal opportunity”, or “women empowerment”, have led to nothing.

See http://skmclasses.kinja.com/progressively-daughters-become-monsters-1764484338

See http://skmclasses.kinja.com/vivacious-vixens-1764483974

There can be thousands of more such random examples, where “Bigger Shape / size” of males have influenced our culture, our Society. Let us recall the reasons, that we already learned in standard 10 - 11, Biology text Books. In humans, women have a long gestation period, and also spends many years (almost a decade) to grow, nourish, and stabilize the child. (Million years of habit) Due to survival instinct Males want to inseminate. Boys and Men fight for the “facility (of womb + care)” the girl / woman may provide. Bigger size for males, has a winning advantage. Whoever wins, gets the “woman / facility”. The male who is of “Bigger Size”, has an advantage to win…. Leading to Natural selection over millions of years. In general “Bigger Males”; the “fighting instinct” in men; have led to wars, and solving tough problems (Mathematics, Physics, Technology, startups of new businesses, Wealth creation, Unreasonable attempts to make things [such as planes], Hard work …)
So let us see the IIT-JEE results of girls. Statistics of several years show that there are around 17, (or less than 20) girls in top 1000 ranks, at all India level. Some people will yet not understand the performance, till it is said that year after year we have around 980 boys in top 1000 ranks. Generally we see only 4 to 5 girls in top 500. In last 50 years not once any girl topped in IIT-JEE advanced. Forget about single digit ranks, double digit ranks by girls have been extremely rare. It is all about “good boys”, “hard working”, “focused”, “Bel-esprit” boys.

In 2015, Only 2.6% of total candidates who qualified are girls (upto around 12,000 rank). While 20% of the boys, amongst all candidates qualified. The total number of students who appeared for the exam were around 1.4 million for IIT-JEE main. Subsequently 1.2 lakh (around 120 thousands) appeared for IIT-JEE advanced.

IIT-JEE results and analysis, of many years is given at https://zookeepersblog.wordpress.com/iit-jee-iseet-main-and-advanced-results/

In Bangalore it is rare to see a girl with rank better than 1000 in IIT-JEE advanced. We hardly see 6-7 boys with rank better than 1000. Hardly 2-3 boys get a rank better than 500.

See http://skmclasses.weebly.com/everybody-knows-so-you-should-also-know.html

Thousands of people are exposing the heinous crimes that Motherly Women are doing, or Female Teachers are committing. See https://www.facebook.com/WomenCriminals/

Hyd woman kills newborn boy as she wanted daughter - Times of India

Hyderabad-born Dr. Alka, 38, a single mother, was found hanged to death with a necktie. She was suspected of killing her newborn baby boy.

TINESOFINDIA.HINATNESS.COM
In several countries or rather in several regions of the world, family system has collapsed, due to bad nature and naughty acts of women. Particularly in Britain, and America, almost 50% people are alone, lonely, separated, divorced or failed marriages. In 2013, 48% children were born out of wedlock. It was projected that by 2016, more than 51% children will be born, to unmarried mothers. In these developed countries “paternity fraud” by women, are close to 20%. You can see several articles in the net, and in wikipedia etc. This means 1 out of 5 children are calling a wrong man as dad. The lonely, alone “mothers” are frustrated. They see the children as burden. Love in the Society in general is lost, long time ago. The types of “Mothers” and “Women” we have now........
This is the type of women we have in this world. These kind of women were also someone's daughter.

Mother Stabs Her Baby 90 Times With Scissors After He Bit Her While Breastfeeding Him!

HURT FEMINISM BY DOING NOTHING

- Don’t help women
- Don’t fix things for women
- Don’t support women’s issues
- Don’t come to women’s defense
- Don’t speak for women
- Don’t value women’s feelings
- Don’t portray women as victims
- Don’t protect women

WITHOUT WHITE KNIGHTS FEMINISM WOULD END TODAY

High Priority

- Rich women: They can get away with murder.
- Women: They get all the rights with no responsibility and shelters for homeless women.
- Rich Men: They get bail outs and short prison sentence.
- Girls: They get educational benefits but no violence against girls.
- Boys: They have some support but don’t have any education that fits boys.
- Animals: They have animal rights and PETA.
- Prisoners: They get conjugal visits and a roof.
- Men: Paid slaves.
- Poor Men: Nothing.

Low Priority

Who pays the most Taxes? This is why MGTOW exist.

#MGTOW

Professor Subhashish Chattopadhyay
Spoon Feeding Series - Functions & Graphs

The student must be very good at Graphs of Various kinds of functions; to do well in Continuity, Differentiability, Area, Volume problems. Some limit problems also require concepts of Functions and Graphs. The graphs will not be given in the Questions. In case of Area problems, the student has to draw the graphs quickly, largely to scale; get the intersection points, and then plan for a piece-wise strategy to integrate and find the area.

Let us review the various graphs

\[ y = mx \] will be a straight line passing through the origin. Positive \( m \) will make the line move upwards as we move in positive \( x \) i.e. towards right.

[Graph of \( y = 2x \)]

Don’t get foxed by the angle being almost \( 45^\circ \). The scales in y-axis and x-axis are not same.

If we compare two graphs then it becomes more clear.

In this figure also scales of x-axis and y-axis are not same. But \( y = 6x \) has to be steeper than \( y = 2x \).
This is $y = 3x$ and $y = -5x$ graphs. For $m = -5$ the line moves down.

For $y = mx + c$ the $c$ becomes the intercept in the y-axis.

So $y = 3x - 4$ will look like

If $c$ is a positive number then the intercept in y-axis will be on upper (positive) side.

Graphs of $y = 2x + 3$ and $y = 4x + 5$ will be
Again scales in x-axis and y-axis are different. But point made. See how the graphs pass through 3 and 5 respectively.

- Nature of Curves, Types of Graphs, Shapes are explained / discussed at
  

- Now let us see graphs of Quadratic functions

Graph of \( y = x^2 \) will be

In contrast graph of \( y = -3x^2 \) will be downwards
Graph of $y = \frac{1}{3} x^2$ will be flatter compared to $y = x^2$
Similarly graph of $y = 10x^2$ will be narrow and steeper compared to $y = x^2$

So see comparisons in a single image
Similar things happen with power functions as well. Below we see fraction raised to power $x$.

Let us see the graph of $y = 2^x$. 

plot $y = 2^x$
The graph of $y = 3^x$ will be steeper and is understood easily by comparison.

Now let us compare integer to the power $x$ and fraction to the power $x$.

$y = 4^x$

$y = \left( \frac{1}{3} \right)^x$
What about comparing $y = 3^x$ and $y = -3^{-x}$

Spoon Feeding comparison of $y = 2^x$ and $y = -2^x$
Graph of $y = 4x^2 + 3$ will be 3 units above x-axis. So will pass through $(0, 3)$ The parabola will look similar to $y = x^2$

Let us learn more with graphs of $y = -5x^2 + 6$ and $y = 6x^2 - 7$

Don’t quickly assume that the graphs are intersecting on x axis. The roots are very close.

$5x^2 = 6 \Rightarrow x = \pm \sqrt{6/5} = \pm 1.095$

While $6x^2 = 7 \Rightarrow x = \pm \sqrt{7/6} = \pm 1.0801$
Concept of Shifting of graphs

The graph of \( y = 3(x - 2)^2 \) will be same as \( y = 3x^2 \) while shifted by 2 units towards right.

Similarly graph of \( y = 4(x + 3)^2 \) will be shifted by 3 units on left compared to \( y = 4x^2 \) which is through the origin.
In the above image see how the upper graph is shifted up by 1 due to +1

In the image below the graph is shifted down by -1
The parabola that passes through \((1,0)\) and \((7,0)\) will be \((x - 1)(x - 7)\).

In simple words, the quadratic expression that has roots 1 and 7 is a parabola through 1 and 7.

So, the graph of \(y = (x - 1)(x - 7) = x^2 - 8x + 7\) is:

![Graph of the parabola](image)

If a quadratic expression has roots -3, 5 then it will be a parabola passing through -3 and 5.

So, the graph of \(y = (x + 3)(x - 5) = x^2 - 2x - 15\) is:

![Graph of the parabola](image)
If the Discriminant D < 0 i.e. $b^2 < 4ac$ then the whole parabola is above x-axis signifying imaginary roots. As the parabola does not intersect the x-axis at all. For $a > 0$

If $a$ is negative then the parabola will be downwards.

So graph of $y = (x - 3)^2 + 5$ will be:

![Plot of $y = (x - 3)^2 + 5$]

Meaning minima will be at $x = 3$ so $x^2$ graph shifted right by 3 and added 5 so moved up by 5 units

So we can easily guess the graph of $y = -(x + 5)^2 - 7$.....

It will be shifted left by 5 units. So maxima will be at $x = -5$ and 7 units below x axis.

![Plot of $y = -(x + 5)^2 - 7$]
The parabola is downwards because coeff of $x^2$ is -ve

Don’t use the idea of shift blindly! The graph of $y = e^{x-4}$ is not shifted by 4 units that of $y = e^x$

This is because $e^{x-4} = e^x / e^4$ means just divided by a value

Concept of Reflections

Guess the graph of $y = -e^x$
What about graph of \( y = e^{-x} \) and \( y = -e^{-x} \)

Graph of \( y = x \ln x \)  (Ignore the Imaginary part graph)
Graph of $y = x \ln |x|$

How will the graph of $y = \frac{\ln x}{x}$ look like? (Ignore the Imaginary part)

Graph of $y = \frac{1}{x} \log(x)$
What about graph of \( y = \frac{\ln |x|}{x} \)

**Graph of Floor \( x \), i.e. greatest integer function \( x \), \( y = \lfloor x \rfloor \)**

IIT-JEE 1990 problem and Solution on Area, Tricky graph of \( x \ln x \) is explained / Discussed at

[https://archive.org/details/AreaDefiniteIntegralIITJEE1990TrickyGraphsOfXLnXAndLnXBx](https://archive.org/details/AreaDefiniteIntegralIITJEE1990TrickyGraphsOfXLnXAndLnXBx)

IIT JEE 1984, 1992 Problems and Solutions as being discussed in the class. Explains various kinds of graphs at [https://archive.org/details/AreaDefiniteIntegralIITJEE19841992TypesOfGraphs](https://archive.org/details/AreaDefiniteIntegralIITJEE19841992TypesOfGraphs)

-
Recall $[-3.2]$ is $-4$ the integer less than $-3.2$ while $[-3.99]$ is also $-4$.

What about graph of $y = -[x]$ (i.e. negative of Floor function)

Best way to learn is to “think” and try to plot it yourself, in rough.

There are many theorems related to “Floor or Greatest Integer functions “. Two theorems related to Floor function are discussed while solving a complicated Limit problem.

https://archive.org/details/VeryImportantTwoFloorTheoremsGreatestIntegerFunctionExplanationAndExample

-
Fraction $x$ can be defined as $x - \lfloor x \rfloor$ so graph of $y = \{x\}$ will be:

$$\{2.3\} = 0.3, \{2.4\} = 0.4, \{4.5\} = 0.5, \{4.6\} = 0.6$$

There are infinite number of discontinuities.

Graph of $y = \ln(x)$ Note: Log of negative number is imaginary as discussed in the complex number chapter.

Ignore the graph of the imaginary part.
Graph of $y = \ln |x|$ and $y = -\ln |x|$. 

The graph shows the logarithmic functions for positive and negative values of $x$. The graph of $y = \ln |x|$ is continuous for $x > 0$, but $y = -\ln |x|$ is reflected about the y-axis, indicating the function is defined for $x < 0$ as well. The graphs demonstrate the behavior of logarithmic functions with absolute values.
Graph of $y = \sin x$ vs $y = \sin^{-1} x$

$y = \sin(x)$

$y = \sin^{-1}(x)$

Not sure if the above graph communicates well. Imaginary part of the graph to be ignored / avoided as of this discussion.

$y = \sin^{-1} x$ means $x = \sin y$ The graph of which is drawn much easier.
I am sure this is much better

Graph of $y = \cos x$ vs $y = \cos^{-1} x$
I guess we should see these graphs individually as these graphs are not commonly given in other textbooks.
Actually \( \cos x \) can be drawn in the gap to fit-in well.

Graph of \( y = \csc x \)

\[
\begin{align*}
    y & = \text{csc} x \\
    y & = \cos x \\
    y & = \sin x \\
    \text{Graph of } y = \csc x \\
    \text{Y } = \sin x \text{ has been fit into this}
\end{align*}
\]
Graph of $y = \tan x$

Graph of $y = \tan^{-1} x$
Let us compare these a few more times, so that we can remember...
Graph of $y = \cot x$
Graph of $y = \cot^{-1} x$

$y = \arctan x$

$y = \arccot x$

$y = \cot(x)$

$y = \arccot(x)$

An introduction to Periodic functions, Decision to Multiply or Divide is explained at

https://archive.org/details/PeriodicFunctionsAnIntroductionOfPeriodMultiplyOrDivide

- Graphs of modulus functions

**Starter**

Sketch the graphs of \( y = |\sin x^\circ| \) and \( y = \sin |x^\circ| \) in the interval \(-360^\circ < x < 360^\circ\).
$y = |x|$
Valentine's Day: \( y = |x| \pm \sqrt{4 - x^2} \)
Now let us see Horizontal Parabolas

Graph of $y^2 = 4x$ is of the form $y^2 = 4a \cdot x$

$\begin{array}{|c|}
\hline
\text{plot} & \boxed{-2 |x - 1| + 3} \\
\hline
\end{array}$
Graphs of Cubic Equations ( \( y = x^3 \) ) and higher powers of \( x \)

Graph of \( y = x^3 \) is
A good student can learn a lot by thinking how the graph of negative of the same function will look.

\[
\text{plot } y = -x^2
\]

The previous graph flipped around x-axis
How will \( y = (x + 6)(x - 3)(x - 7) \) look like? \( x = -6, 3 \) and \( 7 \) will be roots. So the graph will pass through \((-6, 0), (3, 0)\) and \((7, 0)\).

If coeff of \( x \) cube is negative then the graph will be downwards for increasing \( x \). Also repeat roots can be there. Try to guess the graph of \( y = (5 - x)(2 - x)^2 \).

This will have roots at \( x = 5 \) and repeat roots (Two roots) at \( x = 2 \) so will touch \( x \) axis at \( x = 2 \).

Because of distorted scale this graph is not a good one. The graph is correct but student must be mature to understand the distorted scale effects.
The graph below is a better one from a different plotter.

The graph of \( y = x^5 \) or say \( y = x^{11} \) will look very similar.
The difference is highlighted if the graphs are drawn together. All these graphs pass through \((1, 1)\) and \((-1, -1)\). While higher powered graph is flatter in between -1 to 1 and steeper after 1 or before -1.

Graph of \(y = x^2 (x - 3) (x + 3) = x^2 (x^2 - 9)\)

\[X = 0 \text{ will be repeat root due to } x \text{ square. Also } x = 3 \text{ and } x = -3 \text{ will be the roots}\]
Graph of $y = -x^2 (x^2 - 9) + 6$

Now let us see graphs of Circles

Graph of $x^2 + y^2 = R^2$ will have the center at $(0,0)$ and radius will be $R$

So graph of $x^2 + y^2 = 36$ is
Graph of \((x - 3)^2 + (y - 4)^2 = 25\) is

Center is at \((3, 4)\)

Area problems, Graphs of Line, Circle, Triangle Areas discussed and explained at

https://archive.org/details/AreaDefiniteIntegralLineCircleModulusTriangleNatureAndType

Some special graphs

\[
y = \frac{x}{x^2 + 1}
\]
The graph becomes asymptotic to the x-axis as we move towards right or left.

The same will happen for $y = \frac{x^2}{x^2 + 1}$ though very slowly.

\[ \lim_{x \to \pm\infty} \frac{x^2}{1 + x^2} = 1 \]

In this case the graph is asymptotic to 1 ($y = \frac{x^2}{x^2 + 1}$).
Can you guess what will happen in case of $y = \frac{x^2}{x^3 + 2}$? Did you notice the discontinuity around negative cube root of 2?
Can you guess what will happen in case of \( y = \frac{x}{x^2 + 4} \)? Understand the discontinuity around negative cube root of 4.

Find all asymptotes and sketch the function

\[
L(x) = \frac{x^6 + 5}{x^2 + 3x + 1}
\]

\( x^2 + 3x + 1 = 0 \)
\[-3 \pm \sqrt{6} \]
\( x = -\frac{3}{2} \) (2 vertical asymptotes)

\[
y = \frac{(x^3/x^2) + (5/x^3)}{(x^3/x^3) + (3x/x^3) + (1/x^3)}
\]

\[
x^2 + 3x + 1 / x^3 + 0x^2 + 0x + 5
\]
\[
x^3 + 3x^2 + x
\]

\[
-3x^3 - x + 5
\]
\[-3x^3 - 9x - 3
\]
\[
8x + 8
\]
Find all asymptotes and sketch the function

\[ g(x) = \frac{x^2}{x - 3} \]

\( x - 3 = 0 \)
\( x = 3 \) (one vertical asymptote)

\( y = \frac{x^2}{x - 3} = \text{undefined (no horizontal asymptotes)} \)

\( x^2 - 3x \)

\( \frac{x + ((3x)/(x - 3))}{x^2 + 0x + 0} \)
\( x^2 - 3x \)

\( \frac{3x}{x} \)
\( y = \frac{x + \frac{3x}{x}}{x - 3} = x + 3 \) (one oblique asymptote)
Find all asymptotes and sketch the function

\[ y = \frac{x^3 - 4x^2 - 49x - 90}{2x^2 + 12x + 18} \]

\[ 2x^2 + 12x + 18 = 2(x^2 + 6x + 9) = 0 \]

\[ x = -3 \text{ (one vertical asymptote)} \]

\[ y = \frac{x^3 / x^3 - 4x^2 / x^3 - 49x / x^3 - 90 / x^3}{2x^2 / x^3 + 12x / x^3 + 18 / x^3} \]

\[ 0.5x - 5 + \frac{(2x)}{(2x^2 + 12x + 18)} \]

\[ 2x^2 + 12x + 18 \div \frac{x^3 - 4x^2 - 49x - 90}{x^3 + 6x^3 + 9x} \]

\[ -10x^2 - 60x - 90 \]

\[ 2x \]
\[ y = \frac{0.5x - 5}{2x^2 + 12x + 18} + \frac{0}{x^2} = 0.5x - 5 (\text{one oblique asymptote}) \]

\[ h(x) = \frac{4x^5 - 6}{9x^5 + 7x^2} \]

\[ 9x^5 + 7x^2 = x^2(9x^3 + 7) = 0 \]
\[ x = \left(-\frac{7}{9}\right)^{1/3} \text{ or } x = 0 \text{ (two vertical asymptotes)} \]

\[ y = \frac{4x^5}{9x^5 + 7x^2} = \frac{4}{9} (\text{one horizontal asymptote}) \]

There are no oblique asymptotes, as the degree of the numerator is not one greater than the degree of the denominator.
Find all asymptotes and sketch the function

\[
y = \frac{x^4 - 3x^3 + 5x^2 - 7x + 9}{x^5 - x^4 - x^3 + 3x^2 - 5x + 18}
\]

First, reduce the equation to \( y = 1/(x + 2) \)

\[
x + 2 = 0
\]

\[
x = -2 \text{ (one vertical asymptote)}
\]

\[
y = \frac{1}{x} = 0 \text{ (one horizontal asymptote)}
\]

\[
y = \frac{x}{x} + \frac{2}{x}
\]

There are no oblique asymptotes, as the degree of the numerator is not one greater than the degree of the denominator.
Graphs of $y = x + 1/x$ and $y = x - 1/x$
Graph of \[ y = \frac{1}{2} (e^{x^2} + e^{-x^2}) \]

So graph of \[ y = \frac{1}{e^{x^2} + e^{-x^2}} \]
Spoon Feeding graph of \( y = \frac{1}{e^x + e^{-x}} \)

If area enclosed between two curves is needed; then the upper curve function minus the lower curve function needs to be integrated, between the two intersection points as limits.
We generally get questions with line intersecting a parabola kind...
Draw the graphs of $y = x^2$ and $y = 2x - x^2$
Draw the graph of the parabola $y = 4x - x^2$

Draw the graph of $f(x) = x^2 - 6x + 10$, the lines $x = 2$ and $x = 5$ and the x-axis.
Draw the graph of $x = 4 - y^2$ \[\Rightarrow y^2 = 4 - x\]

Draw the graph of $y = 4x + 16$ and $y = 2x^2 + 10$

Solving these two given equations we get the intersection points as $x = -1$ and $x = 3$ (Quadratic equation $2x^2 + 10 = 4x + 16 \Rightarrow 2x^2 - 4x - 6 = 0$

\[\Rightarrow x^2 - 2x - 3 = 0\] Factorize and you get $x = -1$ and $x = 3$)
Draw the graphs of $x = y^2$ and $y = x^2$

We can easily solve to see that the graphs intersect at (1, 1).

Draw the graphs of $y = 2x^2 + 10$, $y = 4x + 16$, $x = -2$, and $x = 5$

The regions in the graph needs to be plotted.
Draw the graphs of $4y^2 = 9x$ and $3x^2 = 16y$

Draw the graph of $y^2 = 6x + 4$
Draw the graph of \( y = x^3 - 4x \)

Graph of \( y = 4 - x^2 \)

\[
\begin{align*}
\text{plot} & \\
y &= 4 - x^2 \\
y &= 3
\end{align*}
\]
We need to know graphs of ellipse and problems related to those

\[ \frac{x^2}{4} + \frac{y^2}{9} = 1 \]

Graphs of \( x = \frac{1}{2} y^2 - 3 \) and \( y = x - 1 \)

The line and the parabola intersect at \( y = -2 \Rightarrow x = y + 1 = -1 \) \( \Rightarrow \) \((-1, -2)\)
and \( y = 4 \Rightarrow x = y + 1 = 5 \) so \((5, 4)\)

the function becomes \( y = \pm \sqrt{2x + 6} \)

Graph of \( x = -y^2 + 10 \) and \( x = (y-2)^2 \).

The intersection points are \( y = -1 \) and \( y = 3 \).
See the graphs
Spoon Feed

Draw the graphs of $x = 2$ and $y^2 = 8x$
Graph of general \( x = a \) and \( y^2 = 4ax \)

- Graph of ellipse \( 4x^2 + 9y^2 = 36 \)
Graphs of \( y^2 = x \) and the line \( y = x \)

We see the intersection point is \((1, 2)\).

Spoon Feeding Graph of \( y^2 = 4x \) and \( y = 2x \)

We see the intersection point is \((1, 2)\).
Graphs of ellipse \( \frac{x^2}{a^2} + \frac{y^2}{b^2} = 1 \) and the line \( \frac{x}{a} + \frac{y}{b} = 1 \)

Assuming \( a > b \)

Graph of curve \( y = 2 \sqrt{1 - x^2} \)
Graph of Circle. The equation of the circle will be $x^2 + y^2 = a^2$ so $y = \sqrt{a^2 - x^2}$

Graphs of $2y = 5x + 7$, $x = 2$, and $x = 8$

Draw the triangle. The vertices being $A(2,1)$, $B(3,4)$, $C(5,2)$
Draw the graphs $y = 2x + 1$ (line A), $y = 3x + 1$ (line B), $y = 4$ (line AC).
Draw graphs of $y^2 \leq 8x$, $x^2 + y^2 \leq 9$

Graphs of $x^2 + y^2 = 16$, and $y^2 = 6x$

The graph will be
Graphs of \( x^2 + y^2 = 4 \), and \((x - 2)^2 + y^2 = 4\)

Equation (1) is a circle with centre O at the origin and radius 2. Equation (2) is a circle with centre C (2,0) and radius 2. Solving equations (1) and (2), we have

\[(x - 2)^2 + y^2 = x^2 + y^2\]

Or \(x^2 - 4x + 4 + y^2 = x^2 + y^2\)

Or \(x = 1\) which gives \(y \pm \sqrt{3}\)

Thus, the points of intersection of the given circles are \(A (1, \sqrt{3})\) and \(A' (1, -\sqrt{3})\)
Graphs of $y^2 = x$ and $x + y = 2$

Equation $(1)$ represents a parabola with vertex at origin and its axis as $x$-axis, equation $(2)$ represents a line passing through $(2,0)$ and $(0,2)$, points of intersection of line and parabola are $(1,1)$ and $(4,-2)$.

A rough sketch of curves is as below:

Graphs of $x = -2$, $x = 3$, $x$-axis $(y = 0)$, and $y = 1 + |x + 1|$

The straight lines for the mod function will flip around $x = -1$
Draw $0 < x < 1$ for $y = |x - 5|$

The graph of the modulus function will flip around $x = 5$

**Horizontal Hyperbola**

\[
\frac{(x-h)^2}{a^2} - \frac{(y-k)^2}{b^2} = 1
\]

**Verticle Hyperbola**

\[
\frac{(x-h)^2}{b^2} - \frac{(y-k)^2}{a^2} = 1
\]

**For both horizontal and vertical hyperbolas,**

slopes of asymptotes = $\pm \frac{b}{a}$
Rectangular Hyperbolas (where the eccentricity $= \sqrt{2}$ $(x^2 - y^2 = 1)$ and $(xy = 1)$ type

\[
\frac{(y - 3)^2}{16} - \frac{(x + 3)^2}{9} = 1
\]
The diagram shows two hyperbolas and a curve defined by the equation $xy = c^2$. The two hyperbolas are given by $y = x$ and $y = -x$. The curve is a rectangular hyperbola with the equation $(y - 3)(x + 2) = 1$. The points $F$ and $F'$ are foci of the hyperbolas.
\[ y(x - 2) = 3x + 10 \]
\[ \Rightarrow y = \frac{3x + 10}{x - 2} \]

A rough sketch of the curve is given below:
Draw $y^2 = 4x$ and $x^2 = 4y$
Draw abstract graph of $y^2 = 4ax$ and $x^2 = 4by$

Equation (1) represents a parabola with vertex $(0,0)$ and axis as $x$-axis, equation (2) represents a parabola with vertex $(0,0)$ and axis as $y$-axis, points of intersection of parabolas are $(0,0)$ and $\left(\frac{4a}{3}, \frac{b}{3}, \frac{4a}{3}, \frac{b}{3}\right)$

A rough sketch is given as:-

![Graph of parabolas](image)
Draw graphs of $x^2 + y^2 = 4$ and $x = \sqrt{3} y$.
Draw Graphs of \( y = |x - 1| \) and \( y = -|x - 1| + 1 \)

\[
\begin{align*}
y &= |x - 1| \\
y &= -(x - 1) + 1
\end{align*}
\]

Draw \( x^2 + y^2 = 16a^2 \) and \( y^2 = 6ax \)

Equation \( (1) \) represents a circle with centre \((0,0)\) and meets axes \((\pm 4a,0),(0,\pm 4a)\).

Equation \( (2) \) represents a parabola with vertex \((0,0)\) and axis as \(x\)-axis. Points of intersection of circle and parabola are \( (2a,2\sqrt{3}a), (2a,-2\sqrt{3}a) \).
Draw \(x^2 + y^2 = 8x\) and \((x - 4)^2 + y^2 = 16\) and \(y^2 = 4x\)

Equation (1) represents a circle with centre \((4,0)\) and meets axes at \((0,0)\) and \((8,0)\).
Equation (2) represents a parabola with vertex \((0,0)\) and axis as \(x\)-axis. They intersect at \((4, -4)\) and \((4, 4)\).

A rough sketch of the curves is as under:

Shaded region is the required region
A rough sketch of curves is given as:

Region \( AOCA \) is sliced into rectangles with area \( (y_1 - y_2)dx \). It slides from \( x = 0 \) to \( x = \sqrt{3} \), so

Graph of \( y = 2x^2 \) and \( y = x^2 + 4 \)

Equation (1) represents a parabola with vertex \((0,0)\) and axis as \( y \)-axis. Equation (2) represents a parabola with vertex \((0,4)\) and axis as \( y \)-axis. Points of intersection of parabolas are \((2,8)\) and \((-2,8)\).

A rough sketch of curves is given as:
Region AOCA is sliced into rectangles with area \( (y_1 - y_2) \Delta x \). And it slides from \( x = 0 \) to \( x = 2 \).

Graphs of \( x = 0, x = 2, y = 2^x, y = 2x - x^2 \)

\[
\Rightarrow y = -\left( x^2 - 2x + 1 - 1 \right) \\
= -\left[ (x - 1)^2 - 1 \right] \\
\Rightarrow y = - (x - 1)^2 + 1 \\
\Rightarrow - (y - 1) = (x - 1)^2 \quad \cdots \cdots (2)
\]

Equation \( (2) \) represents a downward parabola with axis parallel to \( y \)-axis and vertex at \( (1, -1) \) table for equation \( (1) \) is
Graphs of \(3x^2 + 5y = 32\) and \(y = |x - 2|\)

\[
3x^2 = -5\left(y - \frac{32}{5}\right)
\]

\[
y = |x - 2|
\]

\[
\Rightarrow \quad y = \begin{cases} 
- (x - 2), & \text{if } x - 2 < 1 \\
(x - 2), & \text{if } x - 2 \geq 1 
\end{cases}
\]

\[
\Rightarrow \quad y = \begin{cases} 
2 - x, & \text{if } x < 2 \\
x - 2, & \text{if } x \geq 2 
\end{cases}
\]

Equation (1) represents a downward parabola with vertex \((0, \frac{32}{5})\) and equation (2) represents lines. A rough sketch of curves is given as:
Graphs of y-axis (i.e. $x = 0$), and $4y = |4 - x^2|$

$$4y = \begin{cases} 4 - x^2, & \text{if } -2 \leq x \leq 2 \\ x^2 - 4, & \text{if } x < -2, x > 2 \end{cases}$$

$$\Rightarrow x^2 = \begin{cases} -4(y - 1), & \text{if } -2 \leq x \leq 2 \quad (1) \\ 4(y + 1), & \text{if } x < -2, x > 2 \quad (2) \end{cases}$$

Equation (1) represents a parabola with vertex $(0,0)$ and downward. Equation (2) represents an upward parabola with vertex $(0,-1)$. Equation (3) represents a circle with centre $(0,0)$ and meets axes at $(\pm 5,0), (0, \pm 5)$. A rough sketch is as follows:

```
Required area = Region EABCD E
```
Graphs of $x = 0$, $y = 1$, $y = 4$, and $y = 4x^2$

Equation (1) represents a parabola with vertex $(0,0)$ and axis as $y$-axis. $x = 0$ is $y$-axis and $y = 1$, $y = 4$ are lines parallel to $x$-axis passing through $(0,1)$ and $(0,4)$ respectively. A rough sketch of the curves is given as:

Graphs of $y^2 = 2x + 1$, - (1) and $x - y = 1$ - (2)

Equation (1) is a parabola with vertex $\left(-\frac{1}{2},0\right)$ and passes through $(0,1)$, $(0,-1)$. Equation (2) is a line passing through $(1,0)$ and $(0,-1)$. Points of intersection of parabola and line are $(3,2)$ and $(0,-1)$. 
A rough sketch of the curves is given as:

![Graph](image)

Shaded region represents the required area. It is sliced in rectangles of area \((x_1 - x_2)y\). It slides from \(y = -1\) to \(y = 3\), so
Graphs of $y = x - 1$, $- (1)$ and $(y - 1)^2 = 4(x + 1)$

Equation (1) represents a line passing through $(1,0)$ and $(0,-1)$ equation (2) represents a parabola with vertex $(-1,1)$ passes through $(0,3), (0,-1), \left(-\frac{3}{4},0\right)$. Their points of intersection $(0,-1)$ and $(8,7)$.

A rough sketch of curves is given as:-

- Draw graphs of
  
  $y = 6x - x^2$
  
  $\Rightarrow -y = x^2 - 6x$
  
  $\Rightarrow -y = x^2 - 6x + 9 - 9$
  
  $\Rightarrow - (y - 9) = (x - 3)^2 \ (1)$

  And

  $y = x^2 - 2x$
  
  $y + 1 = x^2 - 2x + 1$
  
  $(y + 1) = (x - 1)^2 \ (2)$
Graphs of $y = x^2$, and $y = |x|$

The given area is symmetrical about $y$-axis.

$\therefore$ Area $OACO = $ Area $ODBO$
Graphs of \( y = 2 - x^2 \) \( (1) \) and \( y + x = 0 \) \( (2) \)

Equation \( (1) \) represents a parabola with vertex \( (0, 2) \) and downward, meets axes at \( (\pm \sqrt{2}, 0) \).

Equation \( (2) \) represents a line passing through \( (0, 0) \) and \( (2, -2) \). The points of intersection of line and parabola are \( (2, -2) \) and \( (-1, 1) \).

A rough sketch of curves is as follows:

Shaded region is sliced into rectangles with area \( (y_1 - y_2) \Delta x \). It slides from \( x = -1 \) to \( x = 2 \), so
Let A and B be the points of intersection of the line and parabola.

Coordinates of point A are \((-1, \frac{1}{4})\).

Graphs of

\[ y = 4x - x^2 \]

\[ \Rightarrow -y = x^2 - 4x + 4 - 4 \]

\[ \Rightarrow -y + 4 = (x - 2)^2 \]

\[ \Rightarrow \quad -(y - 4) = (x - 2)^2 \quad (1) \]

And

and \[ y = x^2 - x \]

\[ \left( y + \frac{1}{4} \right) = \left( x - \frac{1}{2} \right)^2 \quad (2) \]
Equation (1) represents a parabola downward with vertex at \( (2,4) \) and meets axes at \( (4,0), (0,0) \). Equation (2) represents a parabola upward whose vertex is \( \left( \frac{1}{2}, -\frac{1}{4} \right) \) and meets axes at \( (1,0), (0,0) \). Points of intersection of parabolas are \( (0,0) \) and \( \left( \frac{5}{2}, \frac{15}{4} \right) \).

A rough sketch of the curves is as under:
Graphs of \( x = 0, \ x = 1 \) and \( y = x \) \( \quad (1) \) and \( y = x^2 + 2 \) \( \quad (2) \)

Equation \( (1) \) is a line passing through \( (2, 2) \) and \( (0, 0) \). Equation \( (2) \) is a parabola upward with vertex at \( (0, 2) \). A rough sketch of curves is as under:-
Graphs of \( x = y^2 \) -- (1) and \( x = 3 - 2y^2 \) -- (2)

Equation (1) represents an upward parabola with vertex \((0,0)\) and axis \(-y\). Equation (2) represents a parabola with vertex \((3,0)\) and axis as \(x\)-axis. They intersect at \((1, -1)\) and \((1, 1)\). A rough sketch of the curves is as under:

![Graph of x = y^2 and x = 3 - 2y^2](image)

Graphs of \( y = 4x - x^2 \) -- (1) \( y = x^2 - x \) -- (2)

Given curves are
\[
y = 4x - x^2
\]
\[
\Rightarrow \quad -y + 4 = (x - 2)^2
\]
and
\[
y = x^2 - x
\]
\[
\Rightarrow \quad \left(y + \frac{1}{4}\right)^2 = \left(x - \frac{1}{2}\right)^2
\]

Equation (1) represents a parabola downward with vertex at \((2, 4)\) and meets axes at \((4,0)\), \((0,0)\). Equation (2) represents a parabola upward whose vertex is \(\left(\frac{1}{2}, -\frac{1}{4}\right)\) and meets axes at \((1, 0)\), \((0, 0)\) and \(\left(\frac{5}{2}, \frac{15}{4}\right)\). A rough sketch of the curves is as under:
Area of the region above x-axis

Graphs of $y = |x - 1|$ -- (1) and $y = 3 - |x|$ -- (2)

$$y = |x - 1|$$

$$\Rightarrow y = \begin{cases} 
1 - x, & \text{if } x < 1 \\
1 + x, & \text{if } x \geq 1 
\end{cases} \quad \quad \quad (1)$$

and

$$y = 3 - |x|$$

$$\Rightarrow y = \begin{cases} 
3 + x, & \text{if } x < 0 \\
3 - x, & \text{if } x \geq 0 
\end{cases} \quad \quad \quad (2)$$
Drawing the rough sketch of lines \((1), (2), (3)\) and \((4)\) as under:

Shaded region is the required area
Graphs of \( y = x|x| - (1) \) and \( x = -1 \) and \( x = 1 \)

Required area = \( \int_{-1}^{1} y \, dx \)

\[= \int_{-1}^{1} x|x| \, dx \]
\[= \int_{-1}^{0} x^2 \, dx + \int_{0}^{1} x^2 \, dx \]
\[= \left[ \frac{x^3}{3} \right]_{-1}^{0} + \left[ \frac{x^3}{3} \right]_{0}^{1} \]
\[= -\left( \frac{1}{3} \right) + \frac{1}{3} \]
\[= \frac{2}{3} \text{ sq. units} \]
A function is a relation for which there is only one value of \( y \) corresponding to any value of \( x \). We sometimes write \( y = f(x) \), which is notation meaning '\( y \) is a function of \( x \)'.

Some very common mathematical constructions are not functions. For example, consider the relation \( x^2 + y^2 = 4 \) because multiple values can satisfy the equation. Ay put \( y = 0 \), then for \( x = 2 \) and \( x = -2 \) both the expression is 4.

There is a simple test to check if a relation is a function, by looking at its graph. This test is called the vertical line test. If it is possible to draw any vertical line (a line of constant \( x \)) which crosses the graph of the relation more than once, then the relation is not a function. If more than one intersection point exists, then the intersections correspond to multiple values of \( y \) for a single value of \( x \).

An inverse function is a function which "does the reverse" of a given function. More formally, if \( f \) is a function with domain \( X \), then \( f^{-1} \) is its inverse function if and only if for every \( x \in X \) we have

\[
 f^{-1} (f (x)) = x
\]
A simple way to think about this is that a function, say \( y = f(x) \), gives you a \( y \)-value if you substitute an \( x \)-value into \( f(x) \). The inverse function tells you which \( x \)-value was used to get a particular \( y \)-value when you substitute the \( y \)-value into \( f^{-1}(x) \).

If \( f(x) = 3x + 2 \) then find \( f^{-1}(x) \)

Solution:
Put \( y = 3x + 2 \) and solve for \( x \) \( \Rightarrow y - 2 = 3x \) or \( x = (y - 2)/3 \)
Now exchange \( x \) and \( y \)
So \( f^{-1}(x) = (x - 2)/3 \)

We say that a function \( g(x) \) is periodic if there is a positive or negative number \( T \) for which \( g(x + T) = g(x) \) for all \( x \) We call \( T \) a period of \( g(x) \)

A periodic function has many periods

Since the graph of \( g \) repeats after \( x \) increases by \( T \), it also repeats after \( x \) increases by \( 2T \), or \(-3T\), or any integer multiple (positive or negative) of \( T \). This means that a periodic function always has many periods. (That’s why the definition refers to “a period” rather than “the period.”)

The period of a periodic function is its smallest positive period. It is the size of a single cycle.

If the function \( g(x) \) is periodic, then its frequency is the number of cycles per unit \( x \).

In general, if \( f \) is the frequency of a periodic function \( g(x) \) and \( T \) is its period, then we have

\[ f = \frac{1}{T} \quad \text{and} \quad T = \frac{1}{f} \]

if the period is measured in seconds, then the frequency is measured in cycles per second.

The term Hertz is a special unit used to measure time frequencies; it equals one cycle per second. Hertz is abbreviated Hz; thus a kilohertz (kHz) and a megahertz (MHz) are 1,000 and 1,000,000 cycles per second, respectively. This unit is commonly used to describe sound, light, radio, and television waves.

Circular functions. While there are innumerable examples of periodic functions, two in particular are considered basic: the sine and the cosine. They are called circular functions because they are defined by means of a circle. To be specific, take the circle of radius 1 centered at the origin in the \( x, y \)-plane.

Given any real number \( t \), measure a distance of \( t \) units around the circumference of the circle. Therefore, if we add \( 2\pi \) units to the \( t \) units we have already measured, we will arrive back at the same point on the circle. That is, we get to the same point on the circle by measuring either \( t \) or \( t + 2\pi \) units around the circumference. We can describe the coordinates of this point two ways:
(\cos(t), \sin(t)) or (\cos(t + 2\pi), \sin(t + 2\pi))

Thus

\cos(t + 2\pi) = \cos(t) \quad \sin(t + 2\pi) = \sin(t),

so \cos(t) and \sin(t) are both periodic, and they have the same period, 2\pi.

Here are their graphs. By reading their slopes we can see (\sin t)' = \cos t and (\cos t)' = -\sin t

\[\begin{align*}
&x = \cos(t) \quad y = \sin(t) \\
&\text{While graph of } y = \sin(4t) \text{ will be}
\end{align*}\]

Their scales are identical, so it is clear that the frequency of \(\sin(4t)\) is four times the frequency of \(\sin(t)\). The general pattern is described in the following table.

<table>
<thead>
<tr>
<th>function</th>
<th>period</th>
<th>frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>\sin(t)</td>
<td>\cos(t)</td>
<td>\frac{2\pi}{1/2\pi}</td>
</tr>
<tr>
<td>\sin(4t)</td>
<td>\cos(4t)</td>
<td>\frac{2\pi/4}{4/2\pi}</td>
</tr>
<tr>
<td>\sin(bt)</td>
<td>\cos(bt)</td>
<td>\frac{2\pi/b}{b/2\pi}</td>
</tr>
</tbody>
</table>
Notice that it is the frequency—not the period—that is increased by a factor of $b$ when we multiply the input variable by $b$.

Constructing a circular function with a given frequency

By using the information in the table, we can circular functions with any period or frequency whatsoever. For instance, suppose we wanted a cosine function $x = \cos(bt)$ with a frequency of 5 cycles per unit $t$. This means

which implies that we should set $b = 10\pi$ and $x = \cos(10\pi t)$

Domain and Range

In simple words - Given a function, the values of $x$ that are allowed to be supplied to the function, so that all terms remain real, is the domain. So Domain is the values for $x$ as it varies.

Range are the values $y = f(x)$ takes, keeping the function as Real. So Range is the way $y$ varies.

Consider the parabola $y = f(x) = 3x^2 + 4$

The graph will be

```
plot y = 3x^2 + 4
```

We see that $y$ is minimum 5 or more. So Range is $[ 5, \infty )$ while Domain is $( -\infty , \infty )$ or $] -\infty , \infty [$

Note : the round brackets $( \text{ or } )$ means open bracket. Meaning close to that value but not equal to.

$\infty$ is always written with open bracket “( )” as we can have a very high value, but exactly infinity is undefined. Other way of writing the same thing is $5 \leq y < \infty$
Thus the \( \leq \) sign is giving the symbol " [ "

In some statement if we get \( 6 < y < 9 \) then same thing will be written as \( (6, 9) \)

But \( 1 \leq y \leq 8 \) will be \([1, 8]\)

For the above problem for all values (positive, negative, zero) of \( x \) the graph exists. So \(-\infty < x < \infty\) watch the \( \leq \) sign is not being used for infinity.

Now some Mathematicians take pleasure in writing the same thing as \( ] -\infty, \infty [ \) as this is easier to print.

Spoon Feeding: Find Domain and Range for \( x = 6y^2 + 7 \) and write the answer in all methods

Graph will be

\[
\text{plot } 6y^2 - x - 7
\]

So Domain is: \( 7 \leq x \) or \( 7 \leq x < \infty \) or \([7, \infty)\) or \([7, \infty]\)

And Range is: \( ( -\infty, \infty ) \) or \( -\infty < y < \infty \)

Spoon Feeding: One of the most favorite questions by Math teachers, of standard 11 is to ask Domain and Range of \( y = f(x) = \sqrt{9 - x} \)

Let me try to solve this without drawing the graph. If the student can guess the graph, of course it becomes very easy to solve.

If \( x \) becomes more than 9 then Numerator(N) becomes negative while Denominator(D) remains positive. As imaginary value of \( y \) is not allowed, \( x \) has to be less than or equal to 9 so \( x \leq 9 \)

N can be zero, but D is not allowed to be zero as dividing by 0 is not defined. So \( x = 1 \) is not allowed. If \( x < 1 \) then the N remain -ve but D becomes -ve. As y cannot be imaginary, \( 1 < x \), meaning \( x \) has to be
greater than 1. But x can be arbitrarily close to 1 say $1 + \delta$ where $\delta$ is very small positive number. In that case $D$ becomes $\delta$ while $N = 9 \cdot (1 + \delta) = \delta \cdot \delta$

$(8 - \delta) / \delta$ tends to $-\infty$ So Range for $y$ will go upwards to infinity. But what will be the least value?

We already saw that $N$ can be zero (0) but not negative. So Range will be from 0 to infinity.

Now let us see the graph

Ignore the red lines of imaginary solutions.

Let us write the Solutions

Domain : $1 < x \leq 9$ or $[1, 9]$ or $]1, 9[$ Happy ?

Range : $0 \leq y < \infty$ or $[0, \infty)$ or $[0, \infty[$

Spoon Feeding : Find Domain and Range of $y = f(x) = \sqrt{\frac{9 - x}{x - 1}}$

If $x$ is in between 1 and 8, say 6 then $N$ is +ve while $D$ is -ve, which is not allowed.

If $x$ is greater than 8 ($8 < x$) then both $N$ and $D$ are negative so fine for us, as $y$ the function is real. If $x$ is less than 1 say 0 or -100 then also $y$ is real. As both $N$, and $D$ is positive.

We need to analyze the function when $x$ is very close to 1 i.e. $x = 1 - \delta$ where $\delta$ is very small positive number. $D$ becomes $1 \cdot (1 - \delta) = \delta$
Positive $D$ divided by $δ$ will tend to infinity.

Now we can write the Domain: $8 \leq x$ or $x < 1$

While Range: $0 \leq y < \infty$ or $[0, \infty)$ or $[0, \infty[$

Let us confirm by drawing the graph. (Though in the exam you have to just guess the graph)

(x > a > 0) &
\end{align*}
\]
\[ \frac{\pi}{2} = \left( \frac{2}{1} - \frac{2}{3} + \frac{4}{5} - \frac{4}{7} + \frac{6}{9} - \frac{6}{11} + \frac{8}{13} - \ldots \right) \]

\[ \pi = \frac{4}{1} - \frac{4}{3} + \frac{4}{5} - \frac{4}{7} + \frac{4}{9} - \frac{4}{11} + \frac{4}{13} - \ldots \]

\[ \frac{\pi}{4} = \frac{1}{1} - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} - \ldots \]

\[ \pi = \sqrt{12} \left( 1 - \frac{1}{3^2} + \frac{1}{5^2} - \frac{1}{7^2} + \ldots \right) \]

\[ \frac{\pi^2}{6} = \frac{1}{1^2} + \frac{1}{2^2} + \frac{1}{3^2} + \frac{1}{4^2} + \frac{1}{5^2} + \ldots = \sum_{n=1}^{\infty} \frac{1}{n^2} \]

\[ \int_{0}^{\pi/2} \log \sin x \, dx = \frac{\pi}{2} \log 2 = \frac{\pi}{2} \log \frac{1}{2} \]

Solve a series problem

If \( \frac{1}{1^2} + \frac{1}{3^2} + \frac{1}{5^2} + \ldots \) \( \text{up to} \ \infty \), then value of \( \frac{1}{1^2} + \frac{1}{3^2} + \frac{1}{5^2} + \ldots \) \( \text{up to} \ \infty \) is

(a) \( \frac{\pi^2}{4} \)  
(b) \( \frac{\pi^2}{6} \)  
(c) \( \frac{\pi^2}{8} \)  
(d) \( \frac{\pi^2}{12} \)

**Ans. (c)**

**Solution**  We have \( \frac{1}{1^2} + \frac{1}{3^2} + \frac{1}{5^2} + \ldots \) \( \text{up to} \ \infty \)

\[ = \frac{1}{1^2} + \frac{1}{2^2} + \frac{1}{3^2} + \frac{1}{4^2} + \frac{1}{5^2} + \frac{1}{6^2} + \ldots \] \( \text{up to} \ \infty \)

\[ - \frac{1}{2^2} \left[ 1 + \frac{1}{2^2} + \frac{1}{3^2} + \ldots \right] \]

\[ = \frac{\pi^2}{6} - \frac{\pi^2}{4} = \frac{\pi^2}{8} \]

\[ 1 - \frac{1}{2^2} + \frac{1}{3^2} - \frac{1}{4^2} + \frac{1}{5^2} - \frac{1}{6^2} + \ldots \] \( \text{up to} \ \infty \) \( = \frac{\pi^2}{12} \)

\[ \frac{1}{2^2} + \frac{1}{4^2} + \frac{1}{6^2} + \ldots \] \( \text{up to} \ \infty \) \( = \frac{\pi^2}{24} \)
\[ \sin \sqrt{x} = 1 - \frac{x}{3!} + \frac{x^3}{5!} - \frac{x^5}{7!} + \frac{x^7}{9!} - \frac{x^9}{11!} + \ldots \]

\[ \cos x = 1 - \frac{x^2}{2!} + \frac{x^4}{4!} - \ldots = \sum_{k=0}^{n} \frac{(-1)^k x^{2k}}{(2k)!} \]

\[ \sin x = x - \frac{x^3}{3!} + \frac{x^5}{5!} - \ldots = \sum_{k=0}^{n} \frac{(-1)^k x^{2k+1}}{(2k+1)!} \]

\[ \cosh x = 1 + \frac{x^2}{2!} + \frac{x^4}{4!} + \ldots = \sum_{k=0}^{n} \frac{x^{2k}}{(2k)!} \]

\[ \sinh x = x + \frac{x^3}{3!} + \frac{x^5}{5!} + \ldots = \sum_{k=0}^{n} \frac{x^{2k+1}}{(2k+1)!} \]

\[ \tan^{-1} x = x - \frac{x^3}{3} + \frac{x^5}{5} - \frac{x^7}{7} + \ldots \quad (-1 \leq x < 1) \]

\]
\[
\sin^{-1} x = x + \frac{1}{2} \frac{x^3}{3} + \frac{1 \cdot 3}{2 \cdot 4} \frac{x^5}{5} + \frac{1 \cdot 3 \cdot 5}{2 \cdot 4 \cdot 6} \frac{x^7}{7} + \cdots \quad |x| < 1 \\
\cos^{-1} x = \frac{\pi}{2} - \sin^{-1} x \\
\tan^{-1} x = \begin{cases} 
\frac{\pi}{2} - \frac{x^3}{3} + \frac{x^5}{5} - \frac{x^7}{7} + \cdots \quad |x| < 1 \\
\pm \frac{\pi}{2} + \frac{1}{3x^3} - \frac{1}{5x^5} + \cdots \quad \begin{cases} + \text{if } x \geq 1 \\
- \text{if } x \leq -1 \end{cases}
\end{cases} \\
\sec^{-1} x = \cos^{-1} \left( \frac{1}{x} \right) \\
\csc^{-1} x = \sin^{-1} \left( \frac{1}{x} \right) \\
\cot^{-1} x = \pi - \tan^{-1} x \\
\]
\[
\frac{\pi}{2} - \begin{cases} 
\frac{x^3}{3} - \frac{x^5}{5} + \frac{x^7}{7} - \cdots \quad |x| < 1 \\
px^3 + \frac{1}{3x^3} + \frac{1}{5x^5} + \cdots \quad \begin{cases} p = 0 \text{ if } x \geq 1 \\
p = 1 \text{ if } x \leq -1 \end{cases}
\end{cases}
\]

\[
\ln x = \frac{x-1}{x+1} + \frac{1}{3} \left( \frac{x-1}{x+1} \right)^3 + \frac{1}{5} \left( \frac{x-1}{x+1} \right)^5 + \ldots \\
= 2 \sum_{n=1}^{\infty} \frac{1}{2n-1} \left( \frac{x-1}{x+1} \right)^{2n-1} \quad (x > 0)
\]

\[
\ln x = \frac{x-1}{x} + \frac{1}{2} \left( \frac{x-1}{x} \right)^2 + \frac{1}{3} \left( \frac{x-1}{x} \right)^3 + \ldots \\
= \sum_{n=1}^{\infty} \frac{1}{n} \left( \frac{x-1}{x} \right)^n \quad (x > \frac{1}{2})
\]

\[
\ln (1+x) = \frac{x}{2} x^2 + \frac{1}{3} x^3 + \ldots \\
= \sum_{n=1}^{\infty} (-1)^{n+1} \frac{1}{n} x^n \quad (0 < x < 2)
\]

\[
\log_e (1-x) = -x - \frac{x^2}{2} - \frac{x^3}{3} - \frac{x^4}{4} - \ldots \infty (-1 \leq x < 1)
\]

\[
\log_e (1+x) - \log_e (1-x) = \\
\log_e \left( \frac{1+x}{1-x} \right) = 2 \left( x + \frac{x^2}{3} + \frac{x^3}{5} + \ldots \infty \right) (-1 < x < 1)
\]

\[
\log_e \left( \frac{1+x}{1-x} \right) = \log_e \frac{x+1}{n} = 2 \left( \frac{1}{2n-1} + \frac{1}{3(2n+1)^3} + \frac{1}{5(2n+1)^5} + \ldots \infty \right)
\]

\[
\log_e (1+x) + \log_e (1-x) = \log_e (1-x^2) = -2 \left( \frac{x^2}{2} + \frac{x^4}{4} + \ldots \infty \right) (-1 < x < 1)
\]

\[
\log 2 = \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \frac{1}{5} - \ldots = \frac{1}{1.2} + \frac{1}{3.4} + \frac{1}{5.6} + \ldots
\]
Important Results

(i) \( \int_{0}^{\pi/2} \frac{\sin^n x}{\sin^n x + \cos^n x} \, dx = \frac{\pi}{4} = \int_{0}^{\pi/2} \frac{\cos^n x}{\sin^n x + \cos^n x} \, dx \)

(b) \( \int_{0}^{\pi/2} \tan^n x \, dx = \frac{\pi}{4} = \int_{0}^{\pi/2} \frac{dx}{1 + \tan^n x} \)

(c) \( \int_{0}^{\pi/2} \frac{dx}{1 + \cot^n x} = \frac{\pi}{4} = \int_{0}^{\pi/2} \frac{\cot^n x \, dx}{1 + \cot^n x} \)
